The vibrant color lines against the white probe provide excellent contrast. At first glance, you can determine the depth of the pocket quickly and accurately.

PerioWise® periodontal probes are extremely easy to read and gentle to the tissue. Slightly flexible, with a rounded tip, PerioWise probes offer greater patient comfort and are safe around implants. They can be autoclaved and used repeatedly.

PerioWise, multi-colored periodontal probes are available with (3-5-7-10) and (3-6-9-12) markings. A green mark from 0-3mm indicates healthy tissue; readings in the probe’s red markings indicate the need to perform a comprehensive periodontal examination. The PerioWise multi-colored probes are ideal for quick periodontal screening or complete examinations.

PerioWise UNC 12 provides the same comfort and ease of use as our original multi-colored PerioWise probes in the popular UNC 12 style. The intense purple markings provide excellent contrast, indicating 1mm increments up to 12mm. Recommended for complete periodontal exams.
Safe For Use Around Implants

- Slightly flexible for greater patient comfort
- Clearly visible when using intra-oral camera

Fast and Accurate Screening System

The patient Screening Report helps with patient education and compliance.

Screening System Components
- Screening Records for patient chart
- Screening Reports given to patient
- Chairside Patient Education Guide

Safe For Use Around Implants

Restored implants can be difficult to identify. PerioWise is safe; it will NOT scratch implants.

Repeatedly Autoclaved and Reused

After dozens of uses, the non-toxic, FDA-approved coloring on the tip of PerioWise gradually wears away. That’s when it’s time to reorder.
