The #1 retraction paste is now available in syringe or unit dose, you choose!

**Traxodent®**

Hemodent® Paste Retraction System

Saves on chair time and provides predictable results for your patients’ well being.

The #1 retraction paste is now available in syringe or unit dose, you choose!
Easy to use technique; patient friendly!

1 Bend tip for optimal access.
2 Position tip parallel to axial plane of the tooth.
3 Dispense sufficient material to displace tissue.
4 Place Premier® Retraction Cap on tooth structure.
5 Have the patient bite and maintain pressure on the cap. Wait 2 minutes.
6 Rinse away, leaving sulcus open and accessible.

Optional Cord Technique
Traxodent eliminates the need for a second cord.

Dispense sufficient material to displace tissue. Wait about 2 minutes.
Rinse away, leaving sulcus open and accessible.

“Traxodent works fast, stays put and is easy to use.”
- Dean Elledge, DDS, MS Wichita State University, AEGD

“Traxodent can be used in virtually any clinical situation in which control of bleeding is required. When used with a compression cap, it also provides excellent tissue retraction, making it well suited for crown and bridge procedures.”
- Richard H. Nagelberg, DDS, PC
Traxodent® from Premier® provides predictable hemostasis and soft-tissue management in minutes.

Easy, effective hemostasis and retraction
The sleek syringe with bendable tip permits easy application of Traxodent directly into the sulcus. After two minutes, it is rinsed, leaving an open, retracted sulcus.

Traxodent is gentle, absorbent and fast.
The soft paste produces gentle pressure on the sulcus while it absorbs excess crevicular fluid and blood. The aluminum chloride creates an astringent effect without irritating or discoloring surrounding tissue. Traxodent provides predictable hemostasis and retraction in less time and with greater comfort.

Traxodent rinses clean without leaving a residue.
Traxodent's strong affinity to aqueous solutions allows the paste to be rinsed away easily and cleanly. There is no residue left behind that can interfere with impression materials and adhesives.

Quick effective retraction
About 2 minutes – no fumbling with hemostatic solutions – save chair time

Superior hemostasis
Stops bleeding and crevicular seepage while retraction occurs - easily absorbs excess crevicular fluid

Increased patient comfort
Avoid tearing gingiva - less pressure on sensitive tissue

Your choice of easy application
Sleek syringe with bendable tips
Ergonomic unit dose dispenser and capsule

Maximum freshness
Each syringe is packaged in resealable foil pouches

“The ability of Traxodent to stop crevicular fluid and bleeding makes it a must-use product during restorative dentistry. When we speak of products that are game-changers, Traxodent is a must-have in anyone’s restorative arsenal.”

- Ron Kaminer, DDS, Hewlett, NY

Crown and Bridge with Retraction Cap
Using a retraction cap with Traxodent for crown and bridge procedures simplifies moving the paste into the sulcus and provides an atraumatic method for greater retraction. The pressure from the cap quickens and assists hemostasis while the absorbent cotton cap soaks up the fluid in the sulcus. Additionally, the cap quickly brings Traxodent into close contact with the hemorrhaging tissue, which allows the astringent properties to work faster.

Crown and Bridge with Retraction Cord
Traxodent is ideal to replace the second cord in the double cord technique. This technique saves time and lessens the discomfort to the patient while providing greater retraction. Traxodent easily rinses away, eliminating the occurrence of break-through bleeding when removing the second cord.

Loose Tissue
For difficult tissue that will not stay retracted, Traxodent can be used with retraction cord and cap.

CAD-CAM and Laser Assist Gingival Tissue Procedures
Traxodent is suitable to displace the gingiva before a CAD-CAM scan to get a crisp image without the soft tissue obscuring the view of the margin. Dentists who use lasers for retraction can benefit from Traxodent as it provides excellent post-op hemostasis after laser troughing.
Routine Hemostasis
Traxodent offers a convenient and effective way to stop and control blood and crevicular seepage for all routine hemostasis procedures. The bendable tips can be positioned for areas that are difficult to reach. It is easy to dispense at the site of bleeding and will stay put, giving the astringent properties of the aluminum chloride a chance to stop the bleeding while providing temporary shrinkage of tissue without additional tissue trauma. The absorbent clay base has an affinity towards oral fluids and blood. It will draw in fluids and easily washes away leaving a clean field behind.

Ordering Information
9007094  new! Traxodent Unit Dose Pack
Contains: 24 capsules
9007089  new! Unit Dose Syringe Dispenser (3)
9007091  Traxodent Value Pack
Contains: 25 syringes and 50 tips
9007093  Traxodent Starter Pack
Contains: 7 syringes and 15 tips
9007092  Applicator Tips (50)

Premier® Retraction Caps
Anatomic formed cotton caps work synergistically with Traxodent to quicken and assist retraction and hemostasis.

• Easily guides Traxodent into the sulcus
• Compression assists and quickens hemostasis
• Cotton absorbs fluids
• Anatomic form allows easy placement

9048251  Size 1 - Small (120)
9048253  Size 3 - Medium (120)
9048255  Size 5 - Large (60)
9048260  Assorted - (15) #1, (15) #3, (30) #5
Knit-Pak™
Knitted Retraction Cord

Use in combination with Hemodent® or Traxodent® for tissue displacement and hemostasis

- Carries an abundant quantity of hemostatic solution
- Compacts under pressure, making it easier to pack
- Will cut clean and not get entangled in a bur
- Available in 6 color coded sizes, 100% cotton

Each Knit-Pak contains 100 inches (254 cm) of cord.

A stainless steel cutting blade inside the cap automatically cuts the cord upon closing.

The cord piece is held by the cap until removed, preventing it from dropping. Protects cord piece and container from cross-contamination.
