Effective Home Care for Periodontal Patients

Enamelon® Preventive Treatment Gel is formulated with stabilized stannous fluoride and Amorphous Calcium Phosphate (ACP) technology to offer an effective home-use therapy with extra protection for periodontal patients. Enamelon helps prevent caries, gingivitis and treats sensitivity.

Protects Against Caries
- Enamelon is especially helpful for patients with exposed root surfaces.
- 3x greater reduction of enamel solubility¹ and 2x more fluoride uptake than 5,000 ppm toothpaste.²

Protects Against Gingivitis
- Stannous fluoride inhibits bacterial adhesion and growth and is shown to result in significant reductions in plaque and gingivitis with twice-daily use.³

Treats & Helps Prevent Sensitivity
- ACP and stannous fluoride work together to help relieve sensitivity through tubular occlusion.
- A physical barrier is created that covers the dentinal tubules, preventing external stimuli from causing pain or discomfort.

Additional Benefits
- Utilizes Ultramulsion®, a patented technology, that provides a long-lasting coating to lubricate and soothe the soft tissues of the mouth.
- Contains Spilanthes, a natural herb that enhances flavor and offers a refreshing finish.

Occludes Tubules: to Treat Sensitivity

Dentin Surface Post-Treatment Scanning Electron Micrograph (SEM) of dentinal tubules after 5 day application with Enamelon.

Cross Section of Treated Dentin SEM Image of the newly occluded dentinal tubules after day 5 (10 applications) with Enamelon.

Periodontal Prevention Protocol
Start your patients on Enamelon Preventive Treatment Gel at least one month before periodontal treatment. This prevention protocol can help reduce gingivitis, caries and sensitivity, while strengthening the enamel. Then continue the protocol throughout treatment to maximize patient benefit.
Discover the Enamelon® Advantage

Even though Enamelon® Treatment Gel contains only 970 ppm fluoride, this patent pending formula contains the protective properties of stannous fluoride with calcium and phosphate ions to uniquely deliver more fluoride uptake to teeth.

3x greater reduction of enamel solubility

Enamel Solubility Reduction FDA Method #33

Negative Control (Water) recorded a -5.45% Enamel Solubility Reduction

More protection with less fluoride

Enamel Fluoride Uptake (ppm F) FDA Method #40

Enamelon contains the first formula to combine the enamel hardening properties of the stannous ion with the remineralizing potential of amorphous calcium phosphate (ACP) technology. The unique formula provides an enhanced capacity to form loosely-bound calcium fluoride reservoirs. These reservoirs provide a vital source of remineralizing ions in the presence of an acid challenge. The release of these ions helps to promote remineralization and inhibit demineralization.

Patient-Friendly

- Gentle nonabrasive gel
- Gluten, dye and Sodium Lauryl Sulfate (SLS) Free
- Refreshing mint flavor

Ordering Information

9007285 Enamelon® Preventive Treatment Gel
4.0 oz (113 g), Clean Mint, 12/case
